DETAILED ACTION

1. In view of a new ground for rejection, the finality of the last Office action is withdrawn.
2. Applicant asserts "Claims 1-16 remain in the application" (see Paper No. 6). However, it should be noted that claims 1-3, 6, 7, 9-12, and 14-16 remain in this application, while claims 4, 5, 8, and 13 have been cancelled (see Paper No. 3).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-3, 6, 7, 9-12, and 14-16 are rejected under 35 U.S.C. 102(e) as being rejected by U.S. Patent No. 6,687,814 to Duppong.

With regard to independent claims 1, 7 and 12, Duppong discloses a re-configurable interface, and a method of reconfiguring an interface, used in modular electronic architectures including: a host (Fig. 1, item 10); at least one module (Fig. 1, item 20) for interfacing with the host to provide additional functionality to the host; and a configuration controller (Fig. 1, item 101; column 4, lines 6-13) located in the host for reading at least one memory device (Fig. 1, item 206; column 2, lines 61-66) located in

Art Unit: 2111

the at least one module for providing configuration information to the host. Duppong also discloses configurable logic (Fig. 1, item 110; column 4, lines 46-51) operating with the configuration controller for configuring a host interface to operate with an at least one module interface; and a plurality of connector pins at the host and at least one module (Fig. 1, items 114 and 202) that are electrically configured using the configurable logic.

With regard to claims 2, 3, 6, 9-11, and 14-15, Duppong discloses a re-configurable interface, where the configuration controller self-extracts the configuration information from the at least one memory device after interfacing with the at least one module with the host (column 4, lines 6-13), and the re-configurable interface further including a dedicated serial interface (Fig. 1, items 116 and 204) for exchanging information from the at least one memory device to the configuration controller. Duppong also discloses the re-configurable interface, further including a microprocessor (Fig. 1, item 101) for communicating with the configuration controller.

Therefore, Duppong reads on the invention as claimed.

Response to Arguments

5. Applicant's arguments (see Paper No. 6, filed April 6, 2004), with respect to the rejection of claims 1-3, 6, 7, 9-12, and 14-16 under 35 U.S.C. 102(e) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn.

However, upon further consideration, a new ground of rejection is made in view of the newly found prior art reference, U.S. Patent No. 6,687,814 to Duppong. Duppong teaches the invention as claimed.

Conclusion

6. A shortened statutory period for reply is set to expire THREE MONTHS from the mailing date of this communication. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this communication.
